

Highlander Engineering

inspiring the next generation of engineers.

Who Are We?

We are a high school community from Waterloo, Ontario. With over 200 passionate members, our goal is to help curate a community of future engineers.

What we do.

We host weekly software and robotic workshops to help students create projects to get excited about engineering. We hope to ignite a passion for technology and develop valuable skills and experience that will be beneficial in future education and employment environments.

How can you contribute?

We'd love to have you in our club, whether that's to talk about your career, a topic you're passionate about, or even to answer questions from students. We believe your presence at Highlander Engineering will empower our members to further explore the field of STEM.
